

## **IN THE CLAIMS**

Please amend claims 1, 9, 13, 19, 21, 22 and 23.

The text of all pending claims, along with their current status, is set forth below:

1. (Currently amended) A remote server management controller, comprising:  
an external communication interface adapted to ~~communicate according to a first~~  
~~communication protocol and to~~ receive data from a remote user;  
an input/output processor (IOP) adapted to:  
receive data from the external communication interface; and  
transmit data corresponding to the data received from the external  
communication interface to an operating system (OS) of a managed  
server; and  
a virtual communication device (VCD) interface adapted to:  
intercept data received from the OS, the VCD interface comprising a pre-defined  
standard communication interface, the data received from the OS being  
intended for a specific communication interface, and to redirect without  
arbitration the data received from the OS to the remote user via the  
external communication interface instead of redirecting the data received  
from the OS to the specific communication interface. the data being in a  
~~format that is not compatible with the first communication protocol, the~~  
~~data not being addressed to the external communication interface;~~  
~~format the data for transmission according to the first communication protocol;~~  
and

~~to redirect the formatted data to the external communication interface instead of  
a specific communication interface to which the data was addressed.~~

2. (Original) The remote server management controller of claim 1, wherein the specific communication interface is a UART interface of the managed server.
3. (Original) The remote server management controller of claim 1, wherein the specific communication interface is a USB host controller of the managed server.
4. (Original) The remote server management controller of claim 1, wherein data received from the user over the external communication interface is transmitted to the OS of the managed server via a UART interface.
5. (Original) The remote server management controller of claim 1, wherein data received from the user over the external communication interface is transmitted to the OS of the managed server via a USB interface.
6. (Original) The remote server management controller of claim 1, wherein the specific communication interface is a 1394 interface of the managed server.
7. (Original) The remote server management controller of claim 1, wherein data received from the user over the external communication interface is transmitted to the OS of the managed server via a 1394 interface.

8. (Original) The remote server management controller of claim 1, wherein the external communication interface is an Ethernet interface.

9. (Currently amended) A remote server management controller, comprising:  
an input/output processor (IOP) adapted to monitor interrupt data transmitted from a super I/O (SIO) to a southbridge, to alter the interrupt data transmitted from the SIO based on input received from an external user via an external communication interface ~~that is adapted to communicate according to a first communication protocol~~ and to transmit the altered interrupt data to a managed server; and  
a virtual communication device (VCD) ~~that is adapted to~~ that comprises a predefined standard communication interface, the VCD being adapted to:  
intercept responsive data intended to be transmitted to the SIO in response to the altered interrupt data, the responsive data being in a format that is not compatible with the first communication protocol; and  
prevent the responsive data from reaching the SIO;  
format the responsive data for transmission ~~according to the first communication protocol~~; and  
redirect without arbitration the formatted data to the external communication interface ~~instead of a specific communication interface to which the responsive data was addressed.~~

10. (Canceled)

11. (Original) The remote server management controller of claim 9 wherein the input received from the external user is adapted to emulate an interrupt generated by a device in the managed server.

12. (Original) The remote server management controller of claim 9 wherein the external communication interface is an Ethernet interface.

13. (Currently amended) A method of remotely retrieving data from an operating system (OS), the method comprising the acts of:

receiving a request for OS information from a remote user ~~via an external communication interface that is adapted to communicate according to a first communication protocol;~~

transmitting the request for OS information to the OS via a virtual communication device (VCD) interface[[]] comprising a pre-defined standard communication interface;

receiving, via the VCD interface, data responsive to the act of transmitting the request to the OS, the responsive data being ~~in a format that is not compatible with the first communication protocol, the responsive data not being addressed to the external communication interface; and~~ intended for a specific communication interface; and

formatting the responsive data for transmission ~~according to the first communication protocol; and~~

redirecting without arbitration the formatted data to the external communication interface ~~instead of a specific communication interface to which the data was addressed.~~

14. (Original) The method of claim 13 wherein the specific communication interface is a UART interface.

15. (Original) The method of claim 13 wherein the specific communication interface is a USB interface.

16. (Original) The method of claim 13 wherein the specific communication interface is a 1394 interface.

17. (Original) The method of claim 13 further comprising the act of enabling an Ethernet interface to receive the request for OS information.

18. (Original) The method of claim 13 further comprising the act of initiating an out-of-band management communication session.

19. (Currently amended) The method of claim 13 further comprising the act of enabling a ~~the~~ VCD to transmit the request for OS information to the OS.

20. (Original) The method of claim 13 wherein the recited acts are performed in the recited order.

21. (Currently amended) The remote server management controller of claim 1, wherein the ~~format that is not compatible with the first communication protocol~~ pre-defined communication interface comprises a USB interface.

22. (Currently amended) The remote server management controller of claim 9, wherein the ~~format that is not compatible with the first communication protocol~~ pre-defined standard communication interface comprises a USB interface.

23. (Currently amended) The method of claim 13, wherein the ~~format that is not compatible with the first communication protocol~~ pre-defined standard communication interface comprises a USB interface.
